Cardio-respiratory update

with

Philip Padrid D.V.M.

Adjunct Associate Professor of Small Animal Medicine at the Ohio State University
& Associate, Family Pet Animal Hospital in Chicago.

Sonya Gordon D.V.M., D.V.Sc.

Diplomate, American College of Veterinary Internal Medicine

Clinical Assistant Professor of Cardiology

Texas A & M

Howard Seim D.V.M.

Diplomate, American College of Veterinary

Surgeons

Professor of Surgery

Colorado State University

This seminar has been designed to present the most current information on the diagnosis and treatment of many cardiovascular and respiratory diseases that you are commonly asked to manage in your patients. The main emphasis of the seminars will be to give you practical information that you can readily utilize in your practice- along with providing information on the current treatments being offered at the referral centers. The majority of the problems will be presented in 30 minutes or less to maximize the material you take with you to your practice. Drs. Gordon, Seim & Padrid are internationally recognized experts in their fields and lecture extensively throughout the world. All three speakers work at very busy clinical practices. Because of their involvement with busy veterinary centers, these three personable speakers approach clinical problems very practically.

- Diagnostic tests in small animal respiratory medicine- starting with physical exam (anatomic diagnosis like Dr D used to do in neurology), moving thru the common and novel testing approaches (such as use pulse ox in the awake patient with pneumonia, heart failure to decide need to hospitalize, response to therapy etc)**
- Upper airway disease from nose to trachea- diagnosis and cutting edge treatments for nasal, pharyngeal, laryngeal and tracheal diseases -**
- Feline asthma including use of inhaled medications -includes comparisons with human asthmatics, included our experience in the last 5 years using inhaled meds on about 150 cats and about 50 dogs - vidoes of cats with asthma that are open mouth breathing that get inhaled albuterol and are fine within 5 minutes for example**
- Pleural disease-this covers a very novel approach to evaluating pleural fluid and thus the causes of pleural fluid accumulation that we do not teach in veterinary medicine but is the standard approach in human medicine and the approach I have been using for 10 years**

- **Canine chronic bronchitis- includes clinically relevant pathophysiology to help understand why dog airways collapse as they do, lots of videos to show various kinds of collapse under bronchoscopy and fluoro**
- **The 10 drugs I use in respiratory medicine**
- **Diagnosis of canine laryngeal paralysis**
- **Surgical management and prognosis of canine laryngeal paralysis**
- **Diagnosis and Management of Diaphragmatic Hernias**
- **How to perform atraumatic thoracocentesis**
- **When and how to place a chest tube**
- **Surgical management of brachycephalic syndrome (stenotic nares, elongated soft palate, everted laryngeal sacculles)**
- **Tracheostomies: temporary and permanent**
- **Hypertension in small animal medicine**

Is it clinically relevant?

This segment will focus on how and why routine evaluation of blood pressure is clinically important. It will review common canine and feline diseases that are associated with hypertension as well as those diseases that may be exacerbated by undiagnosed hypertension. Finally, clinical management of hypertension will be discussed with emphasis on when to treat and what constitutes a rational therapeutic target.

- **The heart of cardiology in dogs.**

What is the latest?

This segment will focus on the diagnosis and management of common clinically important heart diseases in dogs.

- **The heart of cardiology in cats.**

What can i tell the owner about these diseases?

This segment will focus on the diagnosis and management of common clinically important heart diseases in cats.

- . Clinical approach to acute heart failure.**

What about the newer drugs for this problem?

This segment will be a case based approach to the management of acute heart failure in dogs versus cats.

Venue:

Hilton Back Bay Hilton

40 Dalton St. Boston

Phone Tel: 1-617-236-1100 Fax: 1-617-867-6104

Group Room rate: \$199.00 single or dbl/night plus taxes
